Tecres Platform Admin Guide

How Tecres staff sign in to the platform console, create customer workspaces, look after organizations and their users, respond to alerts, and manage who at Tecres has access.

SCREENS IN THIS GUIDE

Every screenshot was taken from the real application in dark mode, using a fictional customer, **Harbor Logistics Ltd**. Where a screen listed other organizations or staff, those rows are blurred.

ALL TECRES STAFF

1 About the platform console

The platform console is where Tecres runs TecresTrackIT as a service. It is a separate application from the one customers use, with its own sign-in, its own accounts and its own address: `/platform`.

What you can do here

- Create a workspace for a new customer, together with its first administrator.
- See every customer workspace at a glance: users, assets, plan status and risk signals.
- Adjust a customer's user and asset quotas, suspend or reactivate a workspace, and force a password reset for one of its users.
- Watch for failed-login spikes and other automatic alerts.
- Invite other Tecres staff to the console and set their role.

What you cannot do here, by design

- **You cannot sign in as a customer or work inside their workspace.** You can see usage figures, user lists and activity, but not their assets or records.
- You cannot use a Tecres console account to sign in to the customer application, or a customer account to sign in here.

Roles

ACTION	PLATFORM OWNER	PLATFORM SUPPORT
View dashboard, organizations, their users and activity	Yes	Yes
Resolve alerts	Yes	Yes
Create a customer workspace	Yes	No
Suspend or reactivate a workspace	Yes	No
Adjust quotas	Yes	No
Force a customer user's password reset	Yes	No
Invite platform admins and change their roles	Yes	No

Buttons for actions your role cannot perform are hidden, and the server refuses them even if attempted another way.

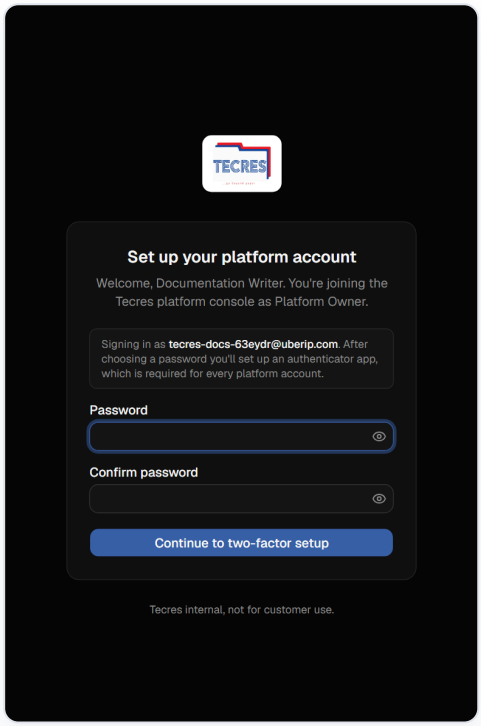

ALL TECRES STAFF

2 Joining and signing in

2.1 Accepting your invitation

Console accounts are created only by invitation from a platform owner. You receive an email titled *"You have been invited to the Tecres platform console"*. The link in it is valid for **7 days**.

1. Open the link. The page greets you by name and shows the role you are joining as.
2. Choose a password and type it again to confirm, then select **Continue to two-factor setup**.

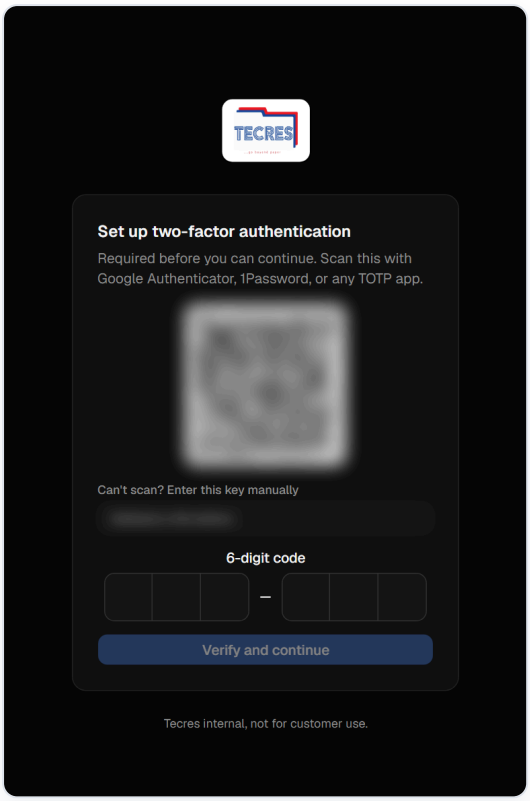

Accepting a platform console invitation.

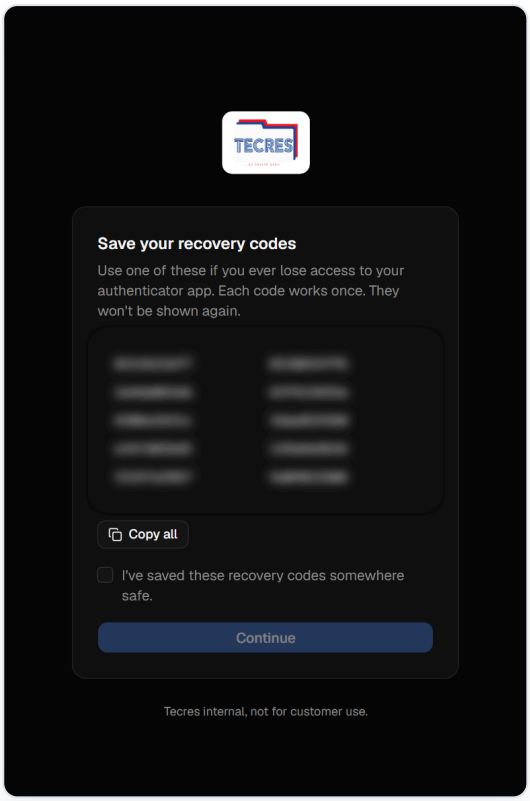

2.2 Setting up two-factor authentication

Before you get into the console, you must connect an authenticator app (Google Authenticator, Microsoft Authenticator, 1Password or similar). This cannot be skipped.

1. In your authenticator app, add an account and scan the QR code. If you cannot scan, type the key shown under **Can't scan? Enter this key manually**.
2. Type the 6-digit code the app shows and select **Verify and continue**.
3. You are shown **10 recovery codes**. Save them somewhere safe and offline, such as a password manager. Each works once, if you ever lose your phone.
4. Tick **I've saved these recovery codes somewhere safe** and select **Continue**.

Scan the QR code (blurred here).

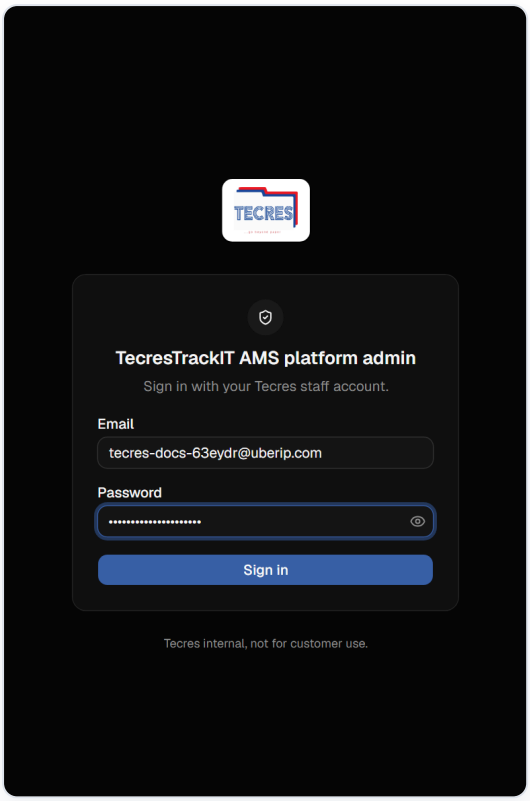

Save your recovery codes (blurred here).

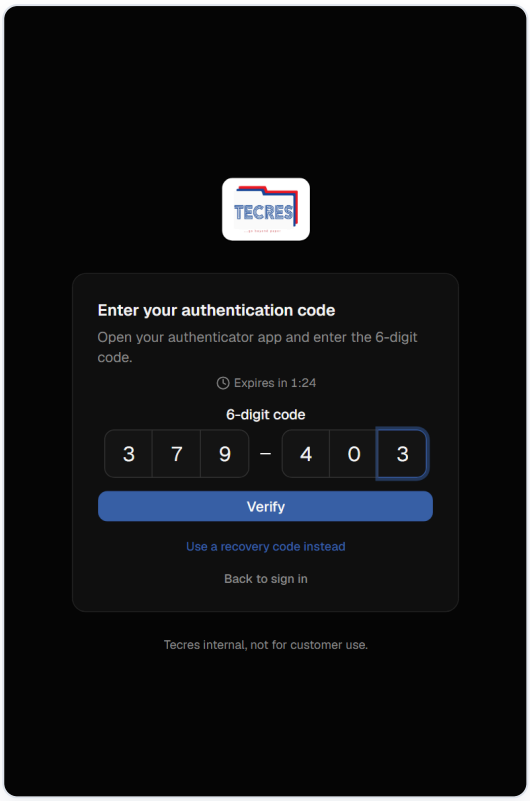

> **NEVER SHARE OR SCREENSHOT THESE**
>
> Anyone with your QR code, setup key or recovery codes can generate your sign-in codes. They are blurred in this guide for that reason.

2.3 Signing in

1. Go to the console sign-in page (`/platform/login`), enter your Tecres email and password, and select **Sign in**.
2. Open your authenticator app and type the current 6-digit code, then select **Verify**. The countdown shows how long you have before you must start again.

Step 1: email and password.

Step 2: the 6-digit code.

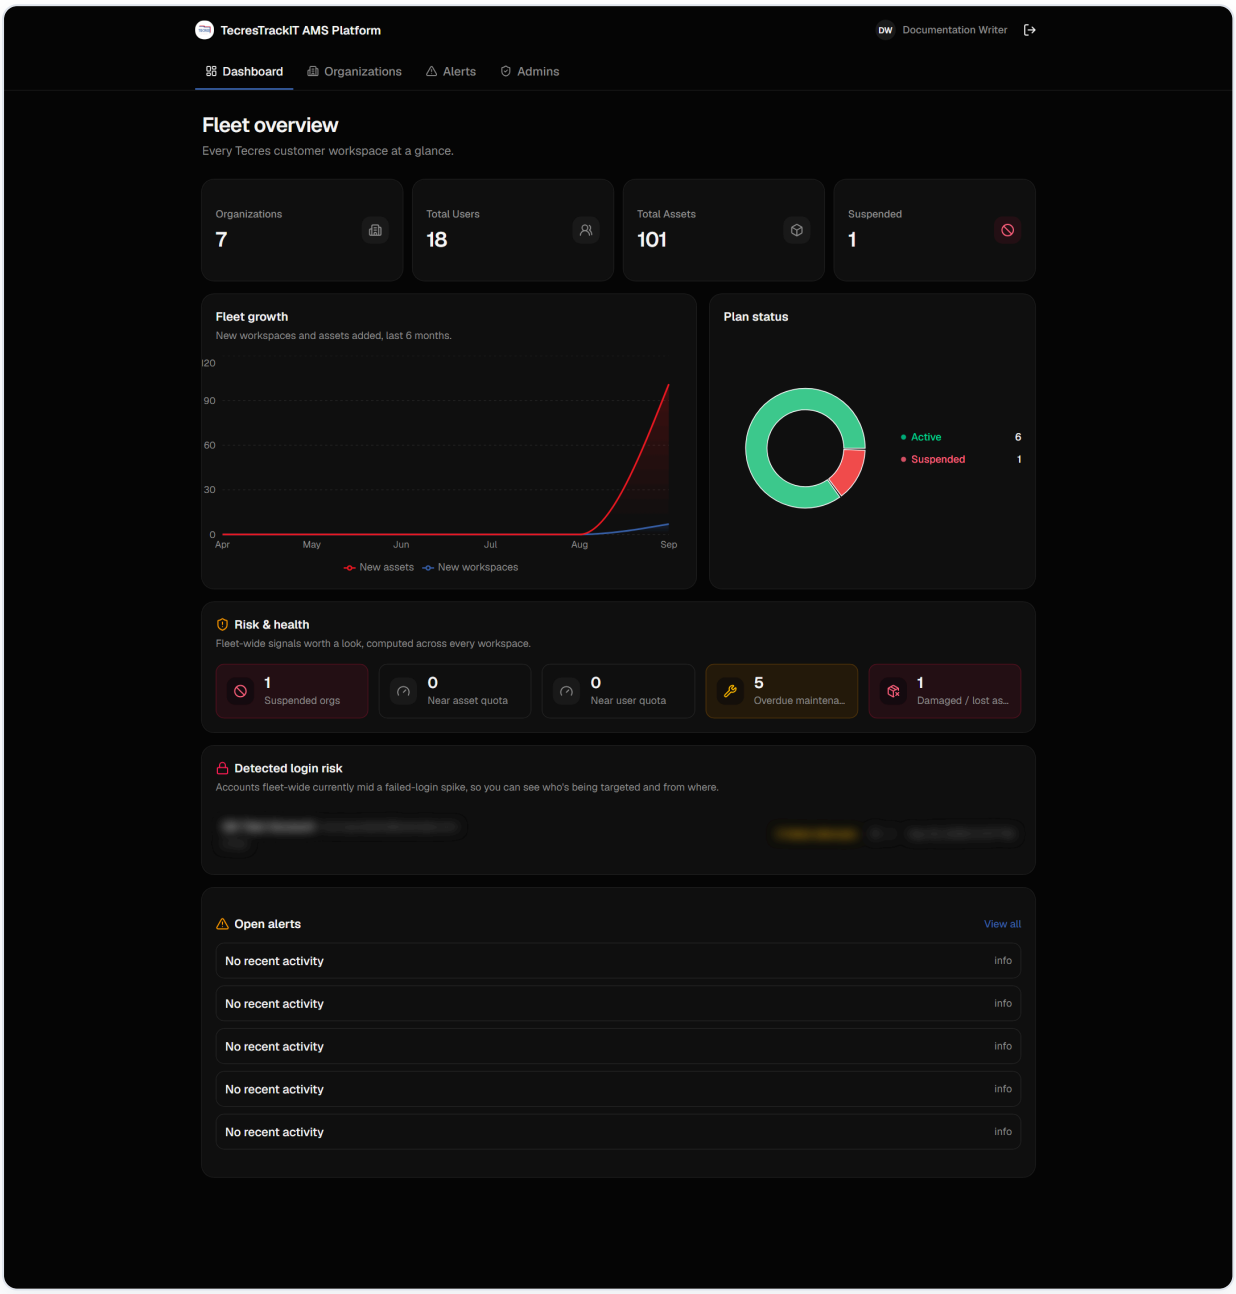

Lost your phone? On the code screen choose **Use a recovery code instead** and enter one of your saved codes.

> **SESSIONS ARE SHORT ON PURPOSE**
>
> A console session lasts 15 minutes and is not kept when you reload or close the tab. If you are returned to the sign-in page, simply sign in again. Sign out with the arrow icon next to your name when you finish.

ALL TECRES STAFF

3 The fleet dashboard

After signing in you land on **Fleet overview**, a live summary of every customer workspace.

The fleet dashboard. Login-risk entries for other customers are blurred.

PANEL	WHAT IT TELLS YOU
Top cards	Number of organizations, total users, total assets across all customers, and how many workspaces are suspended.
Fleet growth	New workspaces and new assets added each month over the last six months.

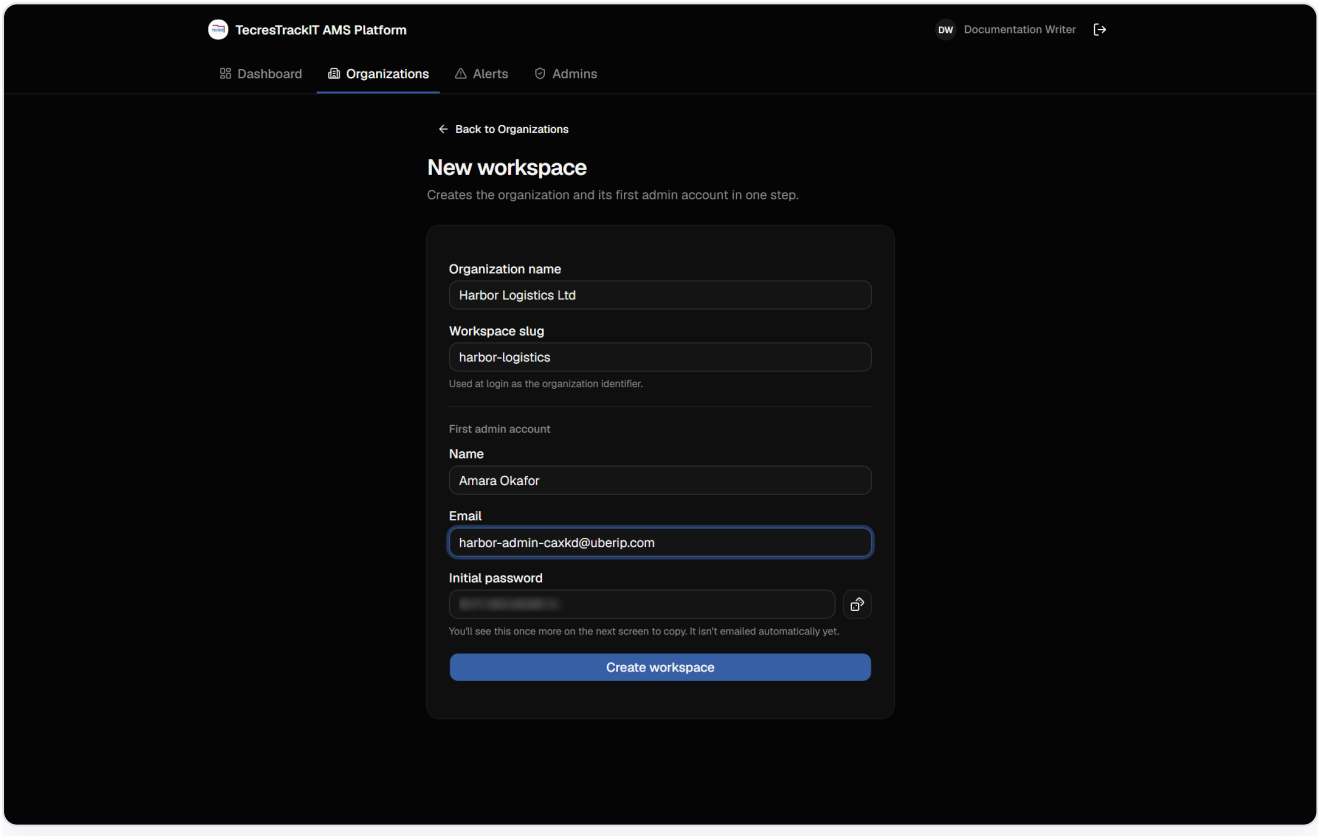

Plan status	How many workspaces are active, suspended or expired.
Risk & health	Workspaces that need attention: suspended, near their asset or user quota, with overdue maintenance, or with damaged or lost assets. Select a tile to see the matching organizations.
Detected login risk	Customer accounts currently in a failed-sign-in spike: who, which workspace, how many attempts, from which IP address and when.
Open alerts	The latest unresolved alerts; **View all** opens the Alerts page (section 6).

PLATFORM OWNERS

4 Creating a customer workspace

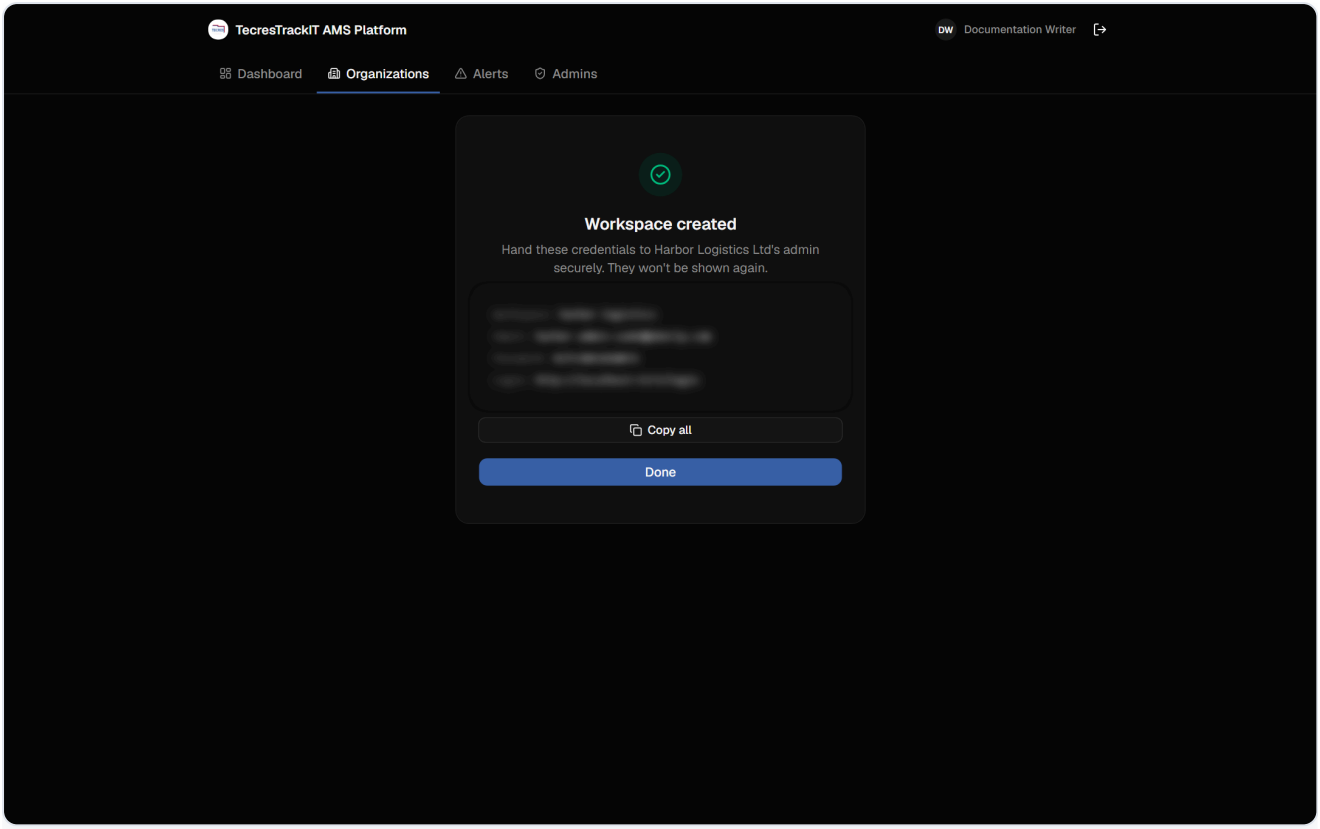

Customers cannot sign themselves up. A platform owner creates each workspace together with its first administrator, then hands the sign-in details to the customer.

1. Go to **Organizations** and select **New Workspace**.
2. Enter the **Organization name**. A **Workspace slug** (a short, unique, lowercase identifier such as `harbor-logistics`) is suggested from the name; adjust it if you wish.
3. Under **First admin account**, enter the customer administrator's **Name** and work **Email**. Each email can belong to only one workspace on the whole platform.
4. An **Initial password** is generated for you. Use the button beside it to generate a different one.
5. Select **Create workspace**.

Creating the Harbor Logistics Ltd workspace. The generated password is blurred.

The confirmation screen shows the workspace, the admin's email, the initial password and the sign-in address **once only**. Select **Copy all**, then **Done**.

The credentials are shown once (blurred here).

HAND OVER CREDENTIALS SECURELY

- Send the email address and the password through **different channels** (for example email for the address and sign-in link, a phone call or text for the password).
- Never paste them into a shared chat, ticket or document.
- The customer sets up two-factor authentication at their first sign-in, so the password alone never gives access.

What happens next for the customer

Signs in with the initial password → **Sets up two-factor** and saves recovery codes → **Onboarding wizard** profile, branding, first data → **Workspace live**

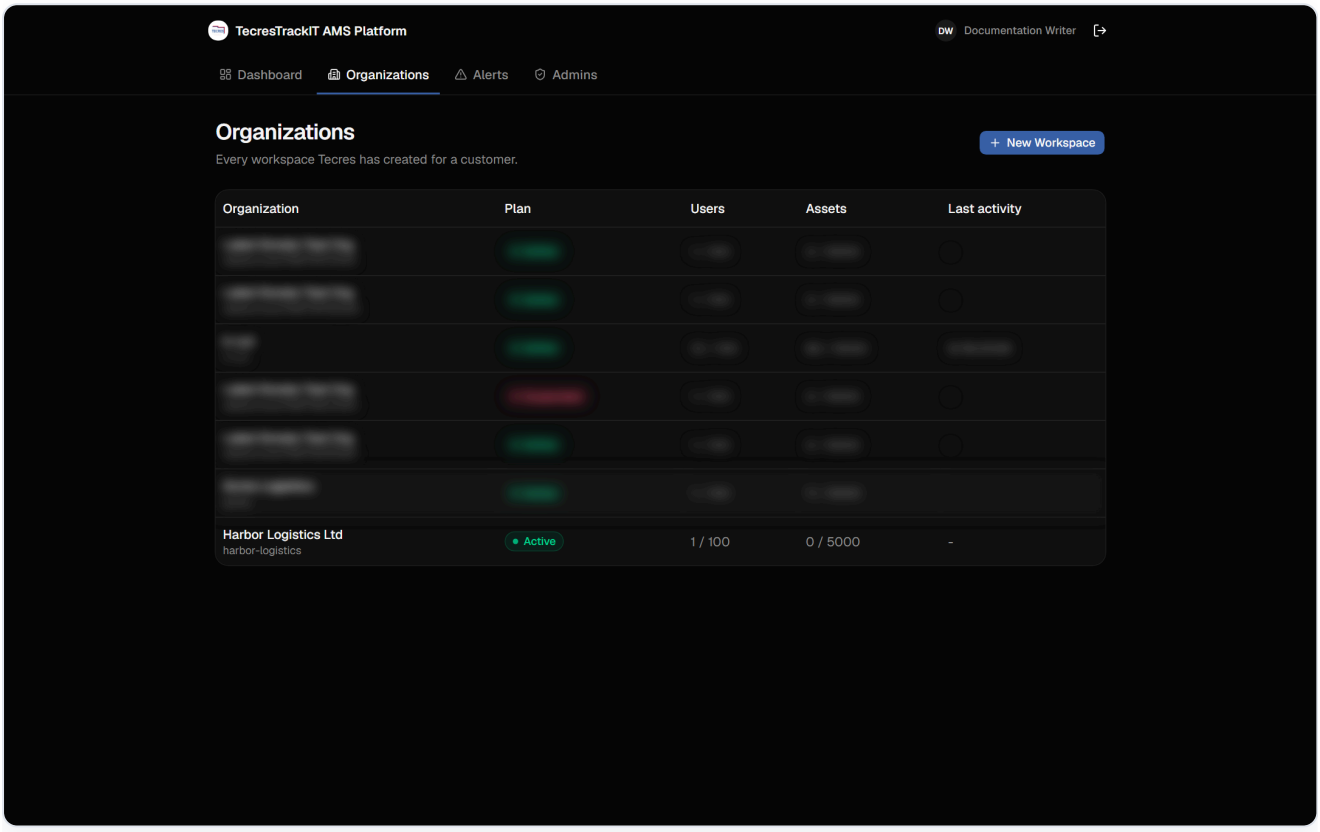

Until they finish onboarding, the organization's detail page shows **Onboarding: Pending**. The customer's own guide (Organization User Guide) walks them through these steps.

OWNERS, SUPPORT

5 Looking after an organization

5.1 The organizations list

Organizations lists every customer workspace with its plan status, users and assets against quota, and when it was last active. Select a row to open it.

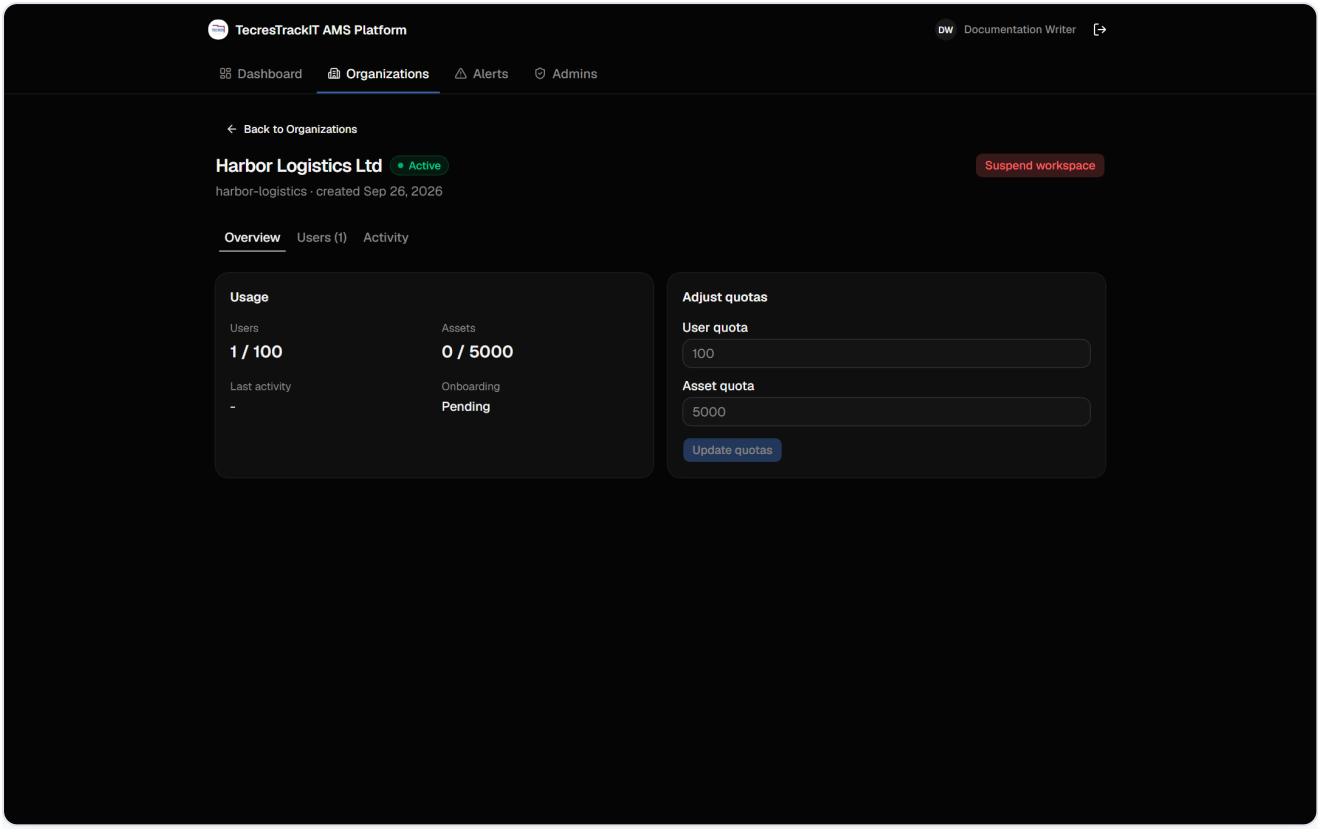

The organizations list. Other customers are blurred.

5.2 Overview and quotas

The **Overview** tab shows usage against quota, last activity and whether onboarding is complete. Platform owners can change quotas here:

1. Under **Adjust quotas**, enter the new **User quota** and/or **Asset quota**.
2. Select **Update quotas**. The change is recorded in the platform admin log.

An organization's overview with the quota editor.

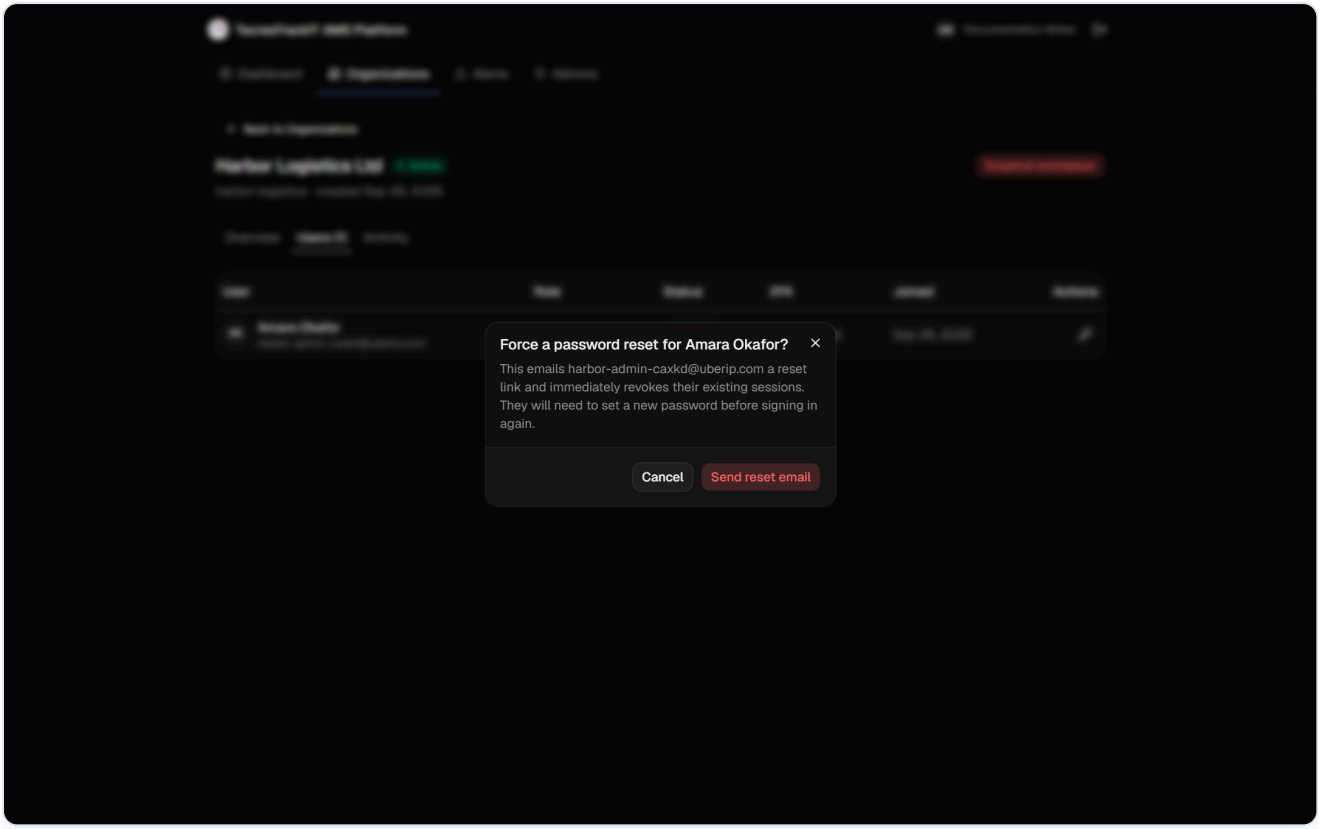

The system raises an alert when a workspace reaches 90% of its asset quota and again at 100%.

5.3 Users and forced password resets

The **Users** tab lists the organization's people with their role, status, whether two-factor is set up, and when they joined. If a customer tells you an account may be compromised, or a user is locked out and cannot reset their own password:

1. Select the key icon (**Force password reset**) on that user's row.
2. Read the confirmation and select **Send reset email**.

The user is **signed out everywhere immediately** and emailed a link to choose a new password. The link lasts 60 minutes.

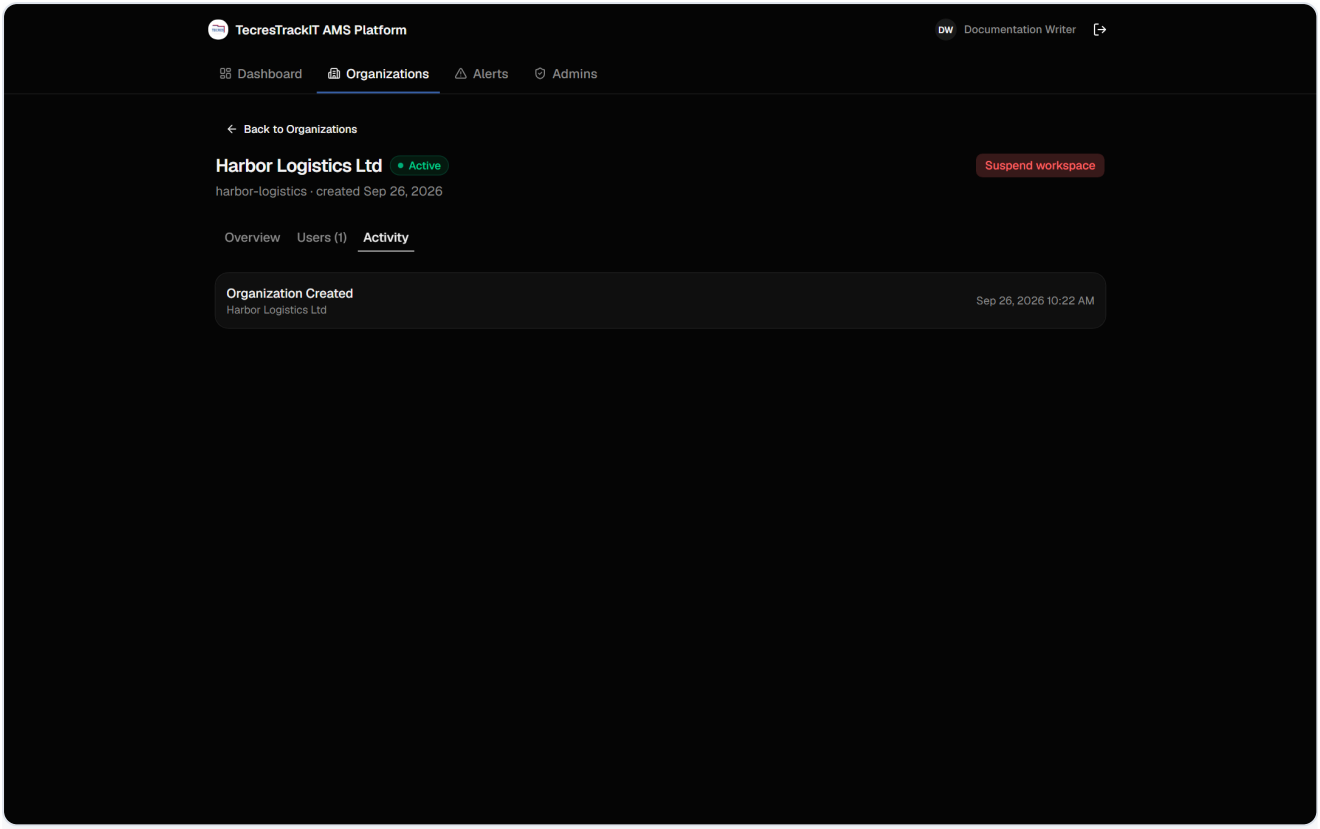

Forcing a password reset.

> **VERIFY BEFORE YOU ACT**
>
> Only force a reset when the request comes from the customer's known administrator through a channel you trust. Confirm the person's identity if the request is unexpected.

5.4 Activity

The **Activity** tab shows the organization's recent activity log: sign-ins (including failed ones, with IP address), changes to assets and people, and workspace events. Use it when investigating a support request or a security concern.

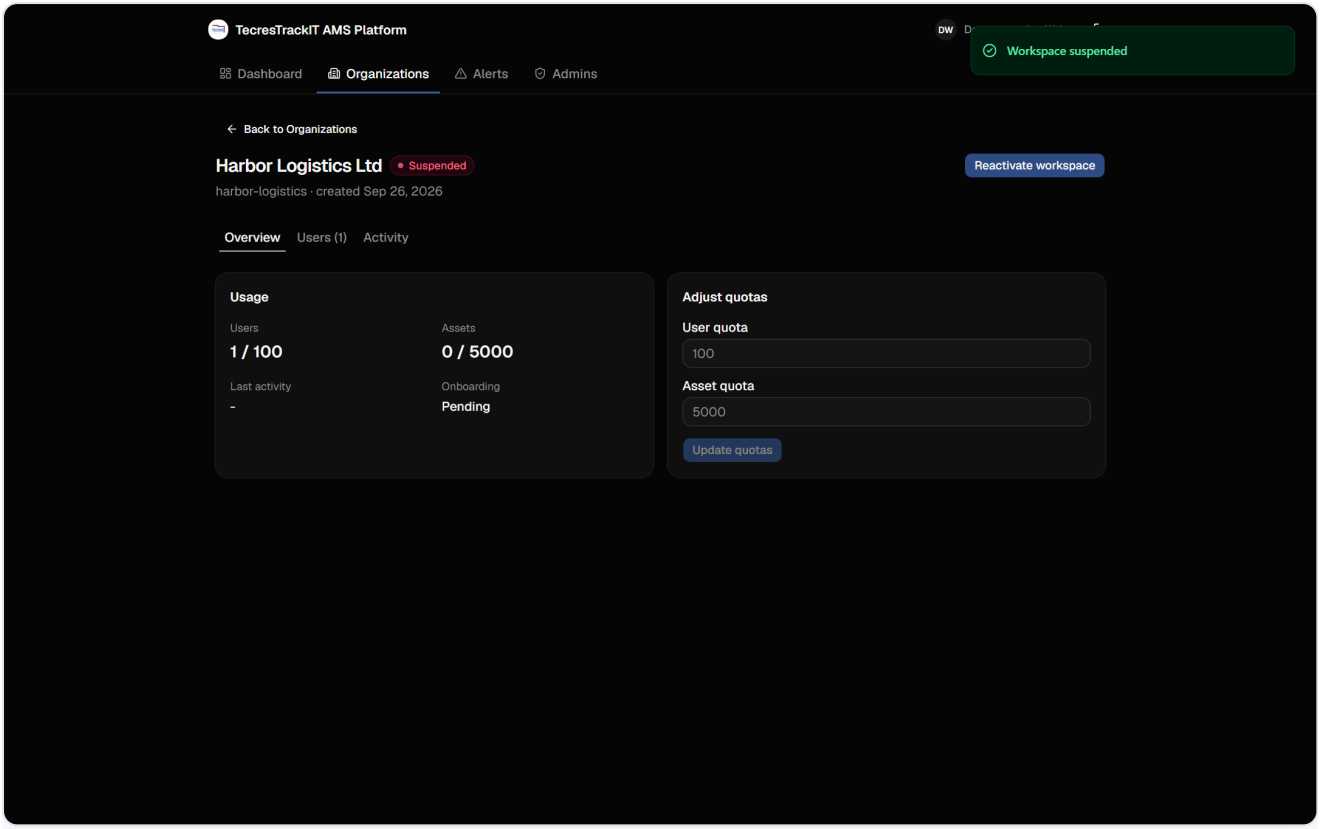

An organization's activity log.

5.5 Suspending and reactivating a workspace

Suspending blocks **every user of that organization** on their next action, with a message that access has been suspended. No data is deleted.

1. Open the organization and select **Suspend workspace** (top right). It takes effect at once; the status badge turns to **Suspended**.
2. To restore access, select **Reactivate workspace**.

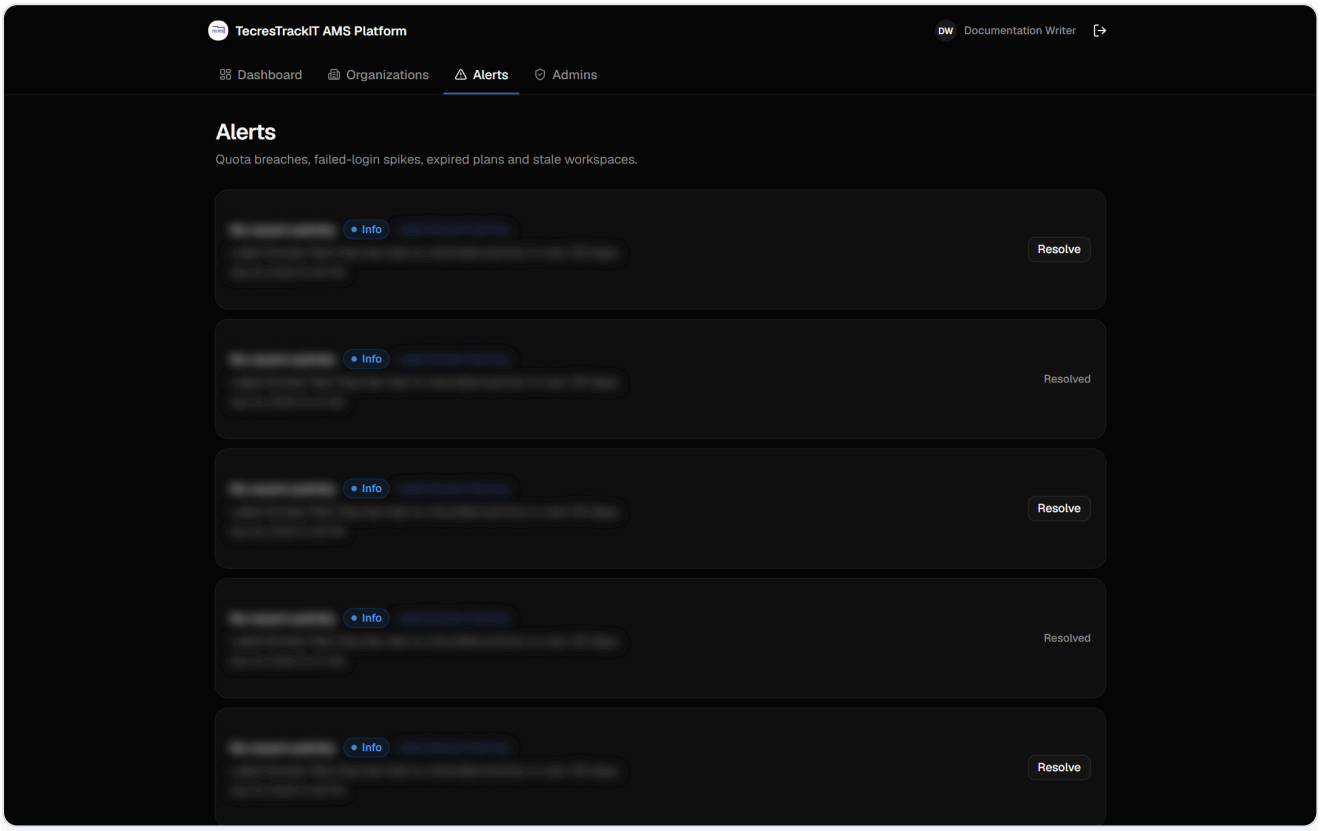

A suspended workspace, with the Reactivate button.

Typical reasons: an unpaid or expired plan, a customer's request during a security incident, or the end of a contract. Every suspension and reactivation is logged with your name.

OWNERS, SUPPORT

6 Alerts

The system checks every workspace every 15 minutes and raises alerts automatically. **Alerts** lists them with severity and the organization concerned.

The Alerts page. Organization names and details are blurred.

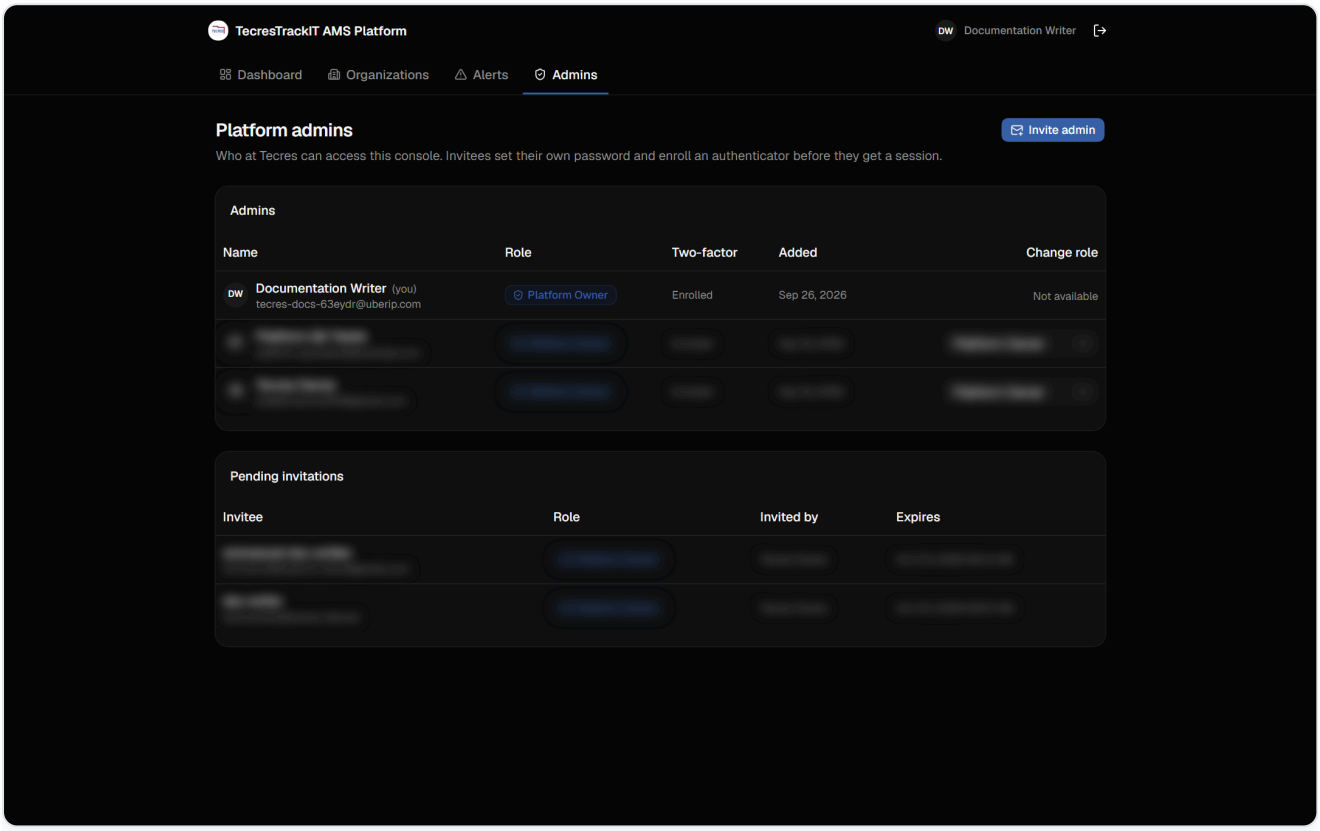

ALERT	SEVERITY	SUGGESTED ACTION
Failed login spike	Warning	Check **Detected login risk** on the dashboard. Contact the customer's administrator; force a password reset if the account may be compromised.
Asset quota nearly reached (90%)	Warning	Discuss a plan change with the customer; raise the quota if agreed.
Asset quota exceeded (100%)	Critical	Raise the quota or agree next steps with the customer.
Plan expired	Critical	Follow up on renewal; suspend if required by the contract.
No recent activity (30 days)	Info	Check in with the customer; they may need help getting started.

When an alert has been dealt with, select **Resolve**. Resolved alerts stay in the list, marked **Resolved**, as a record.

PLATFORM OWNERS

7 Managing platform admins

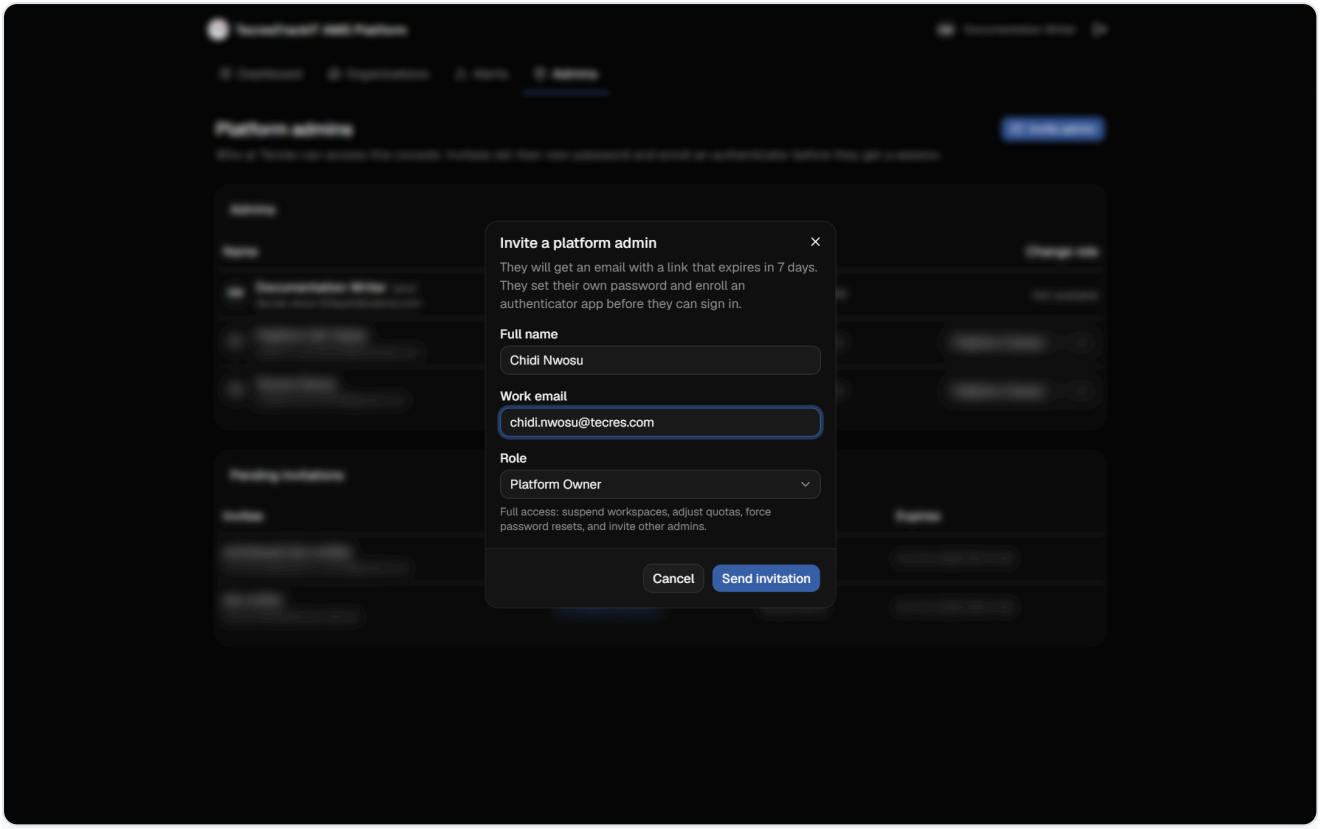

Admins (visible to platform owners only) lists everyone at Tecres with console access, their role, whether they have set up two-factor, and pending invitations.

The Admins page. Other staff are blurred.

Inviting a colleague

1. Select **Invite admin**.
2. Enter their name and Tecres email address, and choose a role. Give **Platform support** unless they need to create or suspend workspaces, change quotas, force resets or manage admins.
3. Select **Send invitation**. They receive an email valid for 7 days and set their own password and two-factor (section 2).

Inviting a new platform admin.

Changing a role

Use **Change role** on a colleague's row to move them between Platform owner and Platform support. You cannot change your own role, so there is always an owner who can manage the team.

> **LEAST PRIVILEGE**
>
> Keep the number of platform owners small. Review the Admins list whenever someone changes job or leaves Tecres, and downgrade or remove access promptly.

ALL TECRES STAFF

8 Security responsibilities

Console accounts can see information about every customer, so they are among the most sensitive accounts Tecres has. Every console user agrees to the following:

	PRACTICE
✓	Use a unique, strong password for the console, stored in a password manager.
✓	Keep your authenticator on a phone that has a screen lock; keep recovery codes offline.
✓	Never share your account, codes or a signed-in screen with anyone, including colleagues.
✓	Hand customer credentials over through two separate channels; never in shared chats or tickets.
✓	Confirm who you are talking to before forcing a reset or suspending a workspace.
✓	Sign out when you finish, especially on shared or public networks.
✓	Report a lost phone, a suspicious email or unexpected console activity to the Tecres security lead at once.

Every action you take in the console (creating, suspending or reactivating a workspace, changing quotas, forcing a reset, inviting or changing an admin, resolving an alert) is recorded against your name.

ALL TECRES STAFF

9 Troubleshooting

SITUATION	WHAT TO DO
"Invalid email or password"	Check the email and password. The message is deliberately the same for every sign-in problem. After 10 quick attempts you must wait 15 minutes before trying again.
"Invalid authentication code"	Make sure your phone's clock is set automatically, then use the newest code. A code shown a minute ago will no longer work.
I lost my phone	Sign in with a recovery code, then ask a platform owner to help you set up a new authenticator. If you have no recovery codes, contact the Tecres security lead.
I was sent back to the sign-in page	Console sessions last 15 minutes and do not survive a page reload. Sign in again.
My invitation link does not work	Links expire after 7 days or once used. Ask a platform owner to send a new invitation.
A customer's user is locked out	After 5 wrong passwords an account locks for 15 minutes. The user can wait, use **Forgot password**, or you can force a password reset (5.3).
A customer lost their authenticator and recovery codes	Their own administrator should help them first. Escalate to a platform owner if the administrator is the one affected.
The new workspace's admin never received their details	The console does not email them; the credentials must be handed over by you (section 4). If they are lost, force a password reset for that admin.
